CODES FOR
ChatGPT

Your photo. A new angle.

BEFORE

AFTER

/SIDECAMERA + /SOFT LIGHT

SWIPE →

Visit the interactive library on gaznil.com

Start with the photograph

1. Upload a clear photograph to ChatGPT with image editing available.
2. Choose one edit intention. Paste a short code or a compatible combination.
3. Add what must stay unchanged: the person, clothing, pose or location.
4. Inspect the result. Check skin, hands, clothing, lighting and background before keeping it.

These names are published community shorthand. They are not official OpenAI presets or a deterministic command system. Publication does not prove that every entry works reliably.

Our seven examples used the shortcodes plus detailed instructions for composition, identity and realism. Code-only results may differ; expanded frames infer unseen details.

Seven selected combinations

Give the scene room.

/SIDECAMERA + /SOFT LIGHT

Go lower.

/LOW ANGLE + /TELEPHOTO

Give the place room.

/WideShot + /ruleofthirds + /GoldenHour

Show the whole outfit.

/FullBody + /negativeSpace

Bring the scene closer.

/foregroundframe

Catch the movement.

/PANNING SHOT

Turn up the action.

/SIDECAMERA + /actionsHOT
